MEMORANDUM FOR: Chief, Atomic/Biological/Chemical Division, OSI

ATTENTION: [REDACTED]

THRU: Chief, Requirements Branch, Reconnaissance Group, CGS

FROM: Chief, CIA/PID(NPIC)

SUBJECT: Storage Installation at Dzhezkazgan, USSR

REFERENCES: Requirement No. C-813-80,763
 CIA Project No. C 1584-63

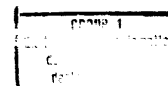

1. A storage area located four nautical miles (nm) west of Dzhezkazgan, USSR (47-52N 68-20E) was studied on good quality [REDACTED] photography in accordance with the above referenced requirement.

2. This storage area is composed of 15 buildings laid out in a rectangular secured area oriented northwest-southeast and measuring 2350 by 760 feet. A triangular area 760 by 700 feet has been added to the northwest end since 1960. The area is served by a rail spur which has been extended from the Dzhezkazgan - Karaganda rail line. (See Figure 1)

3. The principal structures in this installation are six identically shaped buildings placed in two rows of three and oriented northwest-southeast. Each building measures [REDACTED] feet and is divided into four equal sections having an inside measurement of [REDACTED]. Each section has two small shed-like projections or entryways with an interior measurement of [REDACTED] feet. All walls and partitions are [REDACTED] thick. These buildings were under construction in 1960, with the walls and partitions in place but with the roofs lacking. The installation appears complete in 1962. (See Figure 2)

4. There are nine smaller buildings, two of which are outside the main security area and one is at the entrance. The positioning of the remaining six suggest they are used for storage. Three of these buildings appear to have the same specialized construction features as the larger buildings. They measure [REDACTED] and are divided into two sections with a shed-like projection and wall thickness of [REDACTED]. Two of the nine

buildings lacked roofs in 1960 and one had its roof under construction.

5. Security measures observed are double fencing of the main storage area, possible guard towers and placement in an isolated area. A single security fence encloses 2 small buildings which are just outside the entrances.

ACIC. USAF Air Target Chart Series 200, Sheet 245-1-200, 3rd ed., May 61

8. This memorandum with enclosures is sent in partial response to the requirement. Work is continuing and a detailed photo report will be forwarded at a later date. The photo analyst on this project is [REDACTED] and he may be reached on extension [REDACTED] should further questions arise.
